

CAIC Practice Test Questions and Answers

1. What is AI bias?

- A) When AI systems are impartial.
- B) When AI outputs reflect biases from training data
- C) When AI decisions are always correct.
- D) When AI systems work independently of humans.

2. What is deep learning in AI?

- A) Using shallow decision trees.
- B) Using neural networks with many layers to analyze data
- C) Using linear regression to predict outcomes.
- D) Using simple algorithms to make decisions.

3. What is AI-driven automation?

- A) Automating repetitive tasks and decision-making
- B) Hiring more employees for each task.
- C) Replacing all human work.
- D) Using only manual processes.

4. What is computer vision in AI?

- A) AI's ability to analyze text.
- B) AI's ability to interpret visual data from images and videos
- C) AI's ability to analyze speech.
- D) AI's ability to store data.

Answers: 1-B 2-B 3-A 4-B
