

CITB Managers Practice Test Questions and Answers

1. A 'cold work permit' is used when:

- A) Work is being carried out in cold weather only
- B) Work involves no ignition sources, usually near flammable materials, and confirms that the area is safe to work in without introducing hot work hazards
- C) No permit is needed because there is no heat involved
- D) The worker is using refrigerated equipment

2. A permit to work must be signed by:

- A) Any available site worker
- B) The authorising person (who confirms precautions are in place) and the person in charge of the work (who accepts responsibility for following them)
- C) The principal contractor's financial director
- D) The HSE inspector before work commences

3. What is a 'dynamic risk assessment'?

- A) A risk assessment carried out using specialist software
- B) A rapid, ongoing reassessment of risks during a task when conditions change unexpectedly, carried out by the worker or supervisor in real time
- C) A formal risk assessment reviewed dynamically every three months
- D) A risk assessment only applicable to dynamic or moving plant

4. What is the 'root cause' of an accident?

- A) The last action taken before the accident
- B) The fundamental, underlying management, organisational, or design failure that, if corrected, would prevent not just this accident but the entire class of similar incidents
- C) Only factors directly visible at the accident scene
- D) The financial cost of the accident

Answers: 1-B 2-B 3-B 4-B
