

# CWDP Practice Test Questions and Answers

## 1. What frequency bands does Wi-Fi 6E operate in?

- A) 2.4 GHz, 5 GHz, and 6 GHz
- B) 2.4 GHz and 5 GHz only
- C) 5 GHz and 6 GHz only
- D) 6 GHz only

## 2. Which factor most affects RF signal propagation?

- A) Antenna color.
- B) Physical obstructions and interference.
- C) Cable length of the router.
- D) Number of connected devices.

## 3. What is the purpose of BSS Coloring in 802.11ax?

- A) To reduce co-channel interference by allowing devices to differentiate between their BSS and overlapping BSSs
- B) To change the color of the LED indicators on access points
- C) To encrypt wireless frames with color-coded keys
- D) To assign different frequencies to different access points

## 4. What does RF stand for in wireless communication?

- A) Resonance Frequency
- B) Radio Frequency
- C) Random Frequency
- D) Rotational Frequency

**Answers: 1-A 2-B 3-A 4-B**
