

FE Practice Test Questions and Answers

1. Fetal atrial flutter is characterized by:

- A) Irregular atrial rate of 200–220 bpm
- B) Regular atrial rate of 300–500 bpm with variable AV conduction
- C) Regular ventricular rate matching atrial rate
- D) Absent P-wave activity

2. Fetal dilated cardiomyopathy is characterized by:

- A) Concentric wall thickening and preserved cavity size
- B) Ventricular dilation with reduced systolic function
- C) Normal chamber sizes with diastolic dysfunction only
- D) Asymmetric septal hypertrophy

3. In the normal fetus, pulmonary vascular resistance is:

- A) Lower than systemic vascular resistance
- B) Equal to systemic vascular resistance
- C) Higher than systemic vascular resistance
- D) Absent due to non-functional lungs

4. The most common primary cardiac tumor in the fetus is:

- A) Fibroma
- B) Teratoma
- C) Rhabdomyoma
- D) Hemangioma

Answers: 1-B 2-B 3-C 4-C
