

PCR - Polymerase Chain Reaction Certification Practice Test Questions and Answers

1. What is an internal control in PCR?

- A) A known DNA sequence to check reaction success
- B) An off-target primer
- C) A temperature marker
- D) A failed sample

2. What is the role of a lysis buffer?

- A) Color the sample
- B) Neutralize acids
- C) Disrupts membranes and protects nucleic acids
- D) Cuts proteins

3. What is the role of primers in PCR?

- A) Act as enzymes
- B) Bind to proteins
- C) Break DNA strands
- D) Start DNA synthesis at specific sites

4. Why is cycle number important in PCR?

- A) It defines RNA yield
- B) It sets probe sequence
- C) It affects pH
- D) It controls DNA yield and fidelity

Answers: 1-A 2-C 3-D 4-D
