

# Pipefitter Practice Test Questions and Answers

## 1. What does a crane's 'load chart' specify?

- A) The maximum allowable load for each boom length and radius combination under specific operating conditions
- B) The weight of all rigging hardware attached to the crane
- C) The fuel consumption rate at each load level
- D) The maximum wind speed for crane operation

## 2. What tools are commonly used by pipefitters?

- A) Pipe Cutters
- B) Threading Machines
- C) Welding Torches
- D) Paint Rollers

## 3. What does 'proof load' mean for rigging hardware?

- A) A test load applied to hardware before service to verify it can handle its rated capacity without permanent deformation
- B) The maximum load a rigging component can theoretically support before breaking
- C) The working load limit divided by the safety factor
- D) The load applied during hydrostatic testing of pipe

## 4. What are typical work environments for pipefitters?

- A) Construction Sites
- B) Residential Homes
- C) Industrial Facilities
- D) Outdoor Pipeline Systems

**Answers: 1-A 2-A 3-A 4-A**
