

Security Engineering on AWS Certification Practice Test Questions and Answers

1. What does a risk matrix assess?

- A) The probability and impact of identified risks
- B) Only the financial cost of risks
- C) The number of employees affected
- D) The timeline for risk resolution

2. What is the purpose of a risk register?

- A) To document, track, and manage all identified risks throughout a project or operation
- B) To eliminate all risks before starting work
- C) To assign blame when problems occur
- D) To satisfy audit requirements only

3. Why is regular risk reassessment important?

- A) Because the risk landscape changes as conditions, activities, and environments evolve
- B) Because regulators require it exactly once per year
- C) Because it provides work for risk management teams
- D) Because initial assessments are always wrong

4. What distinguishes inherent risk from residual risk?

- A) Inherent risk exists before controls; residual risk remains after controls are applied
- B) Inherent risk is financial; residual risk is operational
- C) Inherent risk is internal; residual risk is external
- D) There is no meaningful difference between them

Answers: 1-A 2-A 3-A 4-A
