

# Test Specialist Certification Practice Test Questions and Answers

## 1. What is the primary objective of test case design in software testing methodologies?

- A) Reducing overall development time
- B) Maximizing defect detection with minimal test execution effort
- C) Eliminating the need for manual testing
- D) Increasing code complexity for thorough coverage

## 2. According to ISTQB testing standards, what percentage of defects are typically found during which testing phase?

- A) 30% during unit testing, 70% during system testing
- B) 60% during unit testing, 40% during integration testing
- C) 80% during early testing phases, 20% during later phases
- D) Equal distribution across all testing phases

## 3. What is the most critical factor when implementing automated testing in agile development environments?

- A) Using the most expensive testing tools available
- B) Maintaining test scripts that provide fast feedback and high reliability
- C) Automating 100% of all possible test scenarios
- D) Replacing all manual testers with automation engineers

## 4. Which technique is most effective for testing boundary conditions in software applications?

- A) Random input generation testing
- B) Equivalence partitioning with boundary value analysis
- C) Load testing with maximum user capacity
- D) Code review and static analysis only

Answers: 1-B 2-C 3-B 4-B
